Synthetic stage-dependent constraints: vegetation pathways and third-party effects
A Frog completion; vegetation=0
B Frog completion; vegetation=1
C Vegetation changes the effect of adding D
D Stage reversal constrains odonate completion
Groups present
FS
FD
FSD
Surviving fraction of initial frog cohort
Frog arrival delay (model days)
None
F refuge
D support
F refuge+D support
S refuge
F refuge+S refuge

F refuge+S refuge+Emergence
D support+S refuge+Emergence
F refuge+D support+S refuge+Emergence
Change in frog survival contrast (V=1 minus V=0)
V=0, reverse edge on
V=0, reverse edge off
V=1, reverse edge on
V=1, reverse edge off
Surviving fraction reaching adult D
