Synthetic annual feedback: whole-range test and exploratory local mechanism
A Positive benefit becomes smaller
Mean F breeding index (last 20 years)
External D source (normalized)
S source = 0.25
S source = 1
S source = 2
B Whole range (D 0.25 to 2): no joint match
Vegetation = 0
Vegetation = 1
D-source slope at high S source
D-source slope at low S source
C Exploratory candidate in upper range (shaded)
Mean F breeding index (last 20 years)
External D source (normalized)
S source = 0.25
S source = 1
S source = 2
D Reverse predation is not required here
Full
No reverse predation
No cue suppression
No intraguild predation
Neither cue nor intraguild
High-S minus low-S D slope (D 1 to 2)
